DETAILED ACTION

1. Applicant's arguments with respect to claims 1-10 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

2. Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over SOLTWEDEL et al. (5,624,978) in view of MATSUO et al. (5,190,830), both references cited in the last Office action, and the Merriam-Webster's Collegiate Dictionary in the definition of the term "plastic". SOLTWEDEL's invention is directed to an aqueous coating composition which renders a metallic substrate capable of severe drawing without sacrificing corrosion protection or electrocoatability (emphasis added). SOLTWEDEL discloses that the steps of applying the coating composition on the metallic substrate utilizing known coil coating process and by any other known techniques to form a basecoat and stoving the basecoat (col. 11, lines 11-31) and the

Art Unit: 1741

basecoat has conductive properties imparted by conductive pigments in the coating composition (col. 10, lines 40-48). SOLTWEDEL also discloses that the basecoated substrate can then be conventionally coated or electrocoated with weldable or non-weldable primer coatings and may be followed by the application of decorative topcoats (see abstract; Examples 1 and 2; col. 14, lines 51-61). The difference between SOLTWEDEL and the above claims is that SOLTWEDEL does not detail the materials of the topcoats. MATSUO shows the use of polyester-melamine resins as the materials for the topcoats (col. 6, lines 47-57) after the electrocoat which are thermoplastic resins (see col. 15, lines 16-19 in SOLTWEDEL). The dictionary defines "plastic" as "any of numerous organic synthetic or processed materials that are mostly thermoplastic or thermosetting polymers of high molecular weight and that can be made into objects, films, or filaments". The subject matter as a whole would have been obvious to one of ordinary skill in the art at the time the invention was made to have modified SOLTWEDEL's teachings as suggested by MATSUO and the dictionary because the selection and the use of thermoplastic or thermosetting polymers as materials in the topcoats would have been within the level of ordinary skill in the art.

Response to Arguments

3. Applicant's arguments filed 3/11/02 have been fully considered but they are not persuasive in view of the new ground rejection as set forth in the paragraph above.

Conclusion

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory

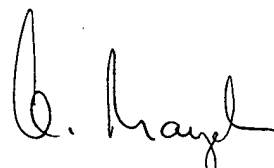

Art Unit: 1741

period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
